

# PC CHARGE SOFTWARE

**PC Charge Pro™ has long been considered the standard in the industry for PC Credit card processing.** With an abundance of features and the ability to process all credit cards, PCCharge Pro makes an excellent choice for any business. With file import and export, recurring billing, customer database, user permissions, you can't go wrong with PC Charge Pro.

Comes with one user license and one merchant number. Operates on any Windows PC or laptop. Internet connection is preferred but not required, as transactions can also be sent through a modem and phone line.

Whether you are a retail brick-and-mortar store, a mail-order/telephone order business, or even an ecommerce business, credit card processing software is a cost-effective solution that will work for you! You don't need to purchase any additional hardware -- simply use your existing PC or Macintosh computer to process all major credit cards and deposit the transaction amount into your existing bank account.

Software processing helps reduce fraud losses, saves you time and money, and provides powerful features and performance, including detailed transaction records and reports. These are features that stand alone terminals cannot provide. With an optional credit card swiper, you can use the software package in retail locations instead of a stand alone terminal.

PC Charge Pro has long been considered the standard in the industry for PC Credit card processing. With an abundance of features and the ability to process all credit cards it is an excellent choice for any business. With file import and export, recurring billing, customer database, user permissions, you can't go wrong with PC Charge Pro.

Comes with one user license and one merchant number. Operates on any Windows PC or laptop. Internet connection is preferred but not required, as transactions can also be sent through a modem and phone line.

Meeting all of your point-of-sale needs!
