Tip and Tax Prompt

The VeriFone Tranz 380 steps up from 32k of RAM (in the Tranz 330) to a more powerful 128k RAM.

This larger memory supports more sophisticated applications such as AVS (Address Verification System, used for phone and mail orders). The extended memory of the VeriFone Tranz 380 also allows you to store more transactions in the terminal memory before having to batch out, making it ideal for merchants who anticipate a high amount of credit card volume.

The Tranz 380 is a proven terminal that offers the merchant the ability to accept all major credit cards. It is supported by almost every processor in the world today so there is no need to worry about compatibility. The VeriFone Tranz 380 handles the basic needs of a retail or mail order merchant flawlessly. The VeriFone Tranz 380 will support a printer which can be added at any time. The Tranz 380 works perfectly with the Printer 220, 250, or 900.
