

HYPERCOM P1300 PIN PAD

The Hypercom P1300 PIN pad has a compact footprint that allows for easy handover to customers giving them the freedom to further shield PIN entry with their hand or body.

It also includes three soft keys that allow users more control over the transaction process and gives clear instructions to guide them through it.

The Hypercom P1300 PIN pad is designed to meet the latest PCI PED security standards for PIN entry, providing merchants with inexpensive migration to the recently imposed security guidelines.

The P1300 PIN pad is compatible with all of the Hypercom product families and offers flexible communications options for easy integration with electronic cash register (ECR) systems.

The P1300 supports both DES and Triple DES DUKPT encryption to protect valuable cardholder PIN information and has a highly durable tamper proof design to protect against external attacks.
